OriginPass — Relational data model

PostgreSQL · eight tables · read from the running database, not from models.py · the AWS instance applies the same migrations

Enumerations

accounts_user.role — ADMIN | COMPANY | HOLDER
companies_company.company_type — COMMERCIAL | ARTISAN
companies_company.verification_track — CHAMBER_OF_COMMERCE | OFFICIAL_REGISTRY | ARTISAN_REVIEW
companies_company.status — PENDING | APPROVED | REJECTED | SUSPENDED
products_product.product_type — COMMERCIAL_ORIGINAL | ARTISAN
products_product.status — ACTIVE | REVOKED
products_custodytransfer.state — INITIATED | ACCEPTED | DECLINED
verification_scanevent.verdict — GENUINE | REVOKED | NOT_FOUND | ALTERED (Sprint 4)
verification_scanevent.device_category — MOBILE | TABLET | DESKTOP | UNKNOWN

Rules the database holds itself — a rule here survives a view that forgets it

Check constraints

company_track_matches_type a commercial company uses CHAMBER_OF_COMMERCE or OFFICIAL_REGISTRY; an artisan company uses ARTISAN_REVIEW

commercial_company_has_registry_code registry_code is filled for COMMERCIAL and empty for ARTISAN (FR08, FR09)

negative_decision_states_a_reason status_reason is filled when status is REJECTED or SUSPENDED (DBR12)

revocation_states_a_reason revocation_reason is filled when status is REVOKED (DBR12)

custody_transfer_changes_holder from_holder_id is not to_holder_id

Unique constraints — each chain of signed records stays linear

audit_entry_links_to_one_predecessor no audit entry is the predecessor of two others

custody_transfer_links_to_one_predecessor within one product, no handover is the predecessor of two others

custody_transfer_one_open_offer partial unique index on product_id WHERE state = INITIATED: one open offer per product, so a piece cannot be sold twice (FR35, Sprint 3)

alert_once_per_scan one alert per (product, scan) (FR49, Sprint 3)

accounts_loginattempt (email, ip_address) one failure streak per address and origin (FR57, Sprint 3)
