OriginPass — Component model

One component per Django app · every requirement of Sprints 1 to 3, and the Sprint 4 work already done, is implemented by a function drawn here · the functions with no requirement beside them exist to support the work: a landing page, a seed command, a schema report

Requirement	Component	Function
SPRINT 1 — delivered, 18 of 18		
FR01, FR02	accounts	register
FR03, FR04	accounts	login
FR05	accounts	logout
FR07, FR08, FR09	companies	application_create
FR10, FR11	companies	application_edit
FR17, UR08	companies	application_detail
FR12	companies	review_list, review_detail
FR13	companies	review_approve
FR14	companies	review_reject
DBR01, DBR11, DBR12	accounts, companies	models and database constraints
SPRINT 2 — delivered, 22 requirements		
FR19, FR20, FR21, FR23, UR10	products	product_create
FR24, FR25	products	product_list
FR26	products	product_edit
FR22	products	qr_download
FR28, FR29, FR30, FR31	verification	verify
UR01, UR02, UR03, UR06	verification	verify (presentation)
UR04	all	Django translation, Spanish default
DBR02, DBR03, DBR04, DBR10	products	Product model, unique indexed code
SPRINT 3 — delivered, + Sprint 4 early		
FR32, FR35 – FR40, FR54	products, verification	custody, transfer_*, verify
FR33, FR46 – FR52, FR58	products, verification	company_analytics(_csv), admin_overview
FR06, FR15–18, FR41–45, FR53, 55, 57	all	password_reset, suspend, revoke, audit_log

Sprint 1 — delivered

Sprint 2 — delivered

Model in Sprint 1, views in Sprint 3

Notation the circle on a stalk is a provided interface — a capability the component offers to the rest of the system. The dashed arrow is a dependency, and it points at the exact function that is needed rather than at the component as a whole.

Component → Django app → views.py. Each function in a box is one view function in that app, and each one is reachable in the interface through a button, a link or a menu entry.

Sprint 3 — delivered (and Sprint 4 work done early)
